Working together  
for a safer world

We're pleased to bring you our additive manufacturing bulletin for the second half of 2016, a collection of research and insights recently published by our additive manufacturing (AM) experts.

With the launch of a [joint industry project with TWI](#) that helps newcomers set up an additive manufacturing process and achieve a certified part, and the release of LR's Guidance Notes for Additive Manufacturing of Metallic Parts, we are exploring how AM technologies are affecting the manufacturing industry.

We'll continue to update you regularly in bulletins like this, and thanks for reading.

David Hardacre  
AM Technical Lead, Lloyd's Register

## Portable printing: How do you ship a factory?

We know how additive manufacturing is changing how companies prototype designs, but could it also change the way companies look at spare and replacement parts?

[Take a look at our infographic about how you could ship an AM "factory."](#)

### Join the LR Additive Manufacturing Forum

Connect with like-minded industry colleagues and get insight into the progress of AM product certification. Plus, learn more about our first event.

### LR's pathway to certification

Clients often ask about our approach to AM certification.

[Read our view of some major aspects that affect quality and certification.](#)

### AM Qualification Workshops

Lloyd's Register offers AM qualification workshops to train design, production and quality assurance staff about the safety and quality criteria for AM product certification.
