TESTO DESCRITTIVO

Siemens - Additive Manufacturing On-Demand Library

Changing work conditions present an opportunity for our community to increase their skills and abilities with Siemens software. Effective immediately, and for the period of the COVID-19 impact, we're offering free **30-day subscriptions to our online learning memberships**. With this offer, the community will have **free access to a rich set of video-based learning, labs and other engaging training** content that can improve proficiency in the products they already use and build skills in new Siemens solutions.

We know that many of our users are working outside their normal environment, so Siemens is working to expand access to our portfolio to our community. A free version of the Mendix application development platform is available for anybody, and many of our solutions are available for free to students and start-up companies. Today we're making available to students and instructors a free 12-month license of the student edition of Mentor's flagship PADS Professional PCB design software. In addition, we're working with our customers to enable home use of some of our products. For more information, visit this special website on our response to COVID-19 with up-to-date ideas, offers and details from across Siemens Digital Industries Software.
